from meal kits to delivery start-ups*

August 2016

HORECA REPORT 2016: WHAT COMES NEXT?

An analysis of the digital disruption to online grocery from meal kits to delivery start-ups

Is the future of food artisanal, local and unique? Or will it be dominated by chains and be bland, inoffensive and globally recognizable?

There are many pointers that we have reached peak chain. Then again there is still a place for the big corporates, as their business model economics trump smaller indie start ups. Starting from much better supply chain efficiencies and better quality controls, they are especially good at the occasional convenience of not having to cook a meal and not having to argue with fussy kids – or for the business traveler and tourist. But they are very much tied to bricks & mortar.

On the other hand the boom in artisanal, organic, health & wellness, independent, street food, etc shows no sign of slowing down. Clearly the future of food is bifurcating and “average is over”, which is bad news for the undifferentiated middle. It will be either the best value/cheapest options (chains) or the luxurious best. The current middle will get squeezed hard.

Behind this development is that fact that many shoppers are starting to shift their meals to prepared food, either from stores or restaurants. This is where chain restaurants can realize the cost benefits of their industrial scale. **It's also a clear argument to team up with the delivery start ups, from GrubHub to Amazon and UberEats.** It should be noted that people who don't cook at home are going to be more sensitive to pricing.

Those cooking at home will be looking for something special when they dine out at a restaurant. That will imply a cuisine they don't normally prepare or something that requires a high level of expertise. It's going to be more artisanal, focused on the craft of cooking. (The high-end Italian, the macrobiotic vegan place, or one of the many family-run ethnic restaurants...)

So what is just around the corner?

With the middle ground being eroded new spaces open up. Especially in large cities, there is an increasing number of new “mini” chains. These tend to edge up the generic chain experience and give shoppers something of a local feel, often with more creative food stylings. Even a handful of locales can reduce operating costs (when food production becomes more centralized) and increase buying power - and of course kitchens can be shared.

The other massive opportunity can be found in the digital transformation and new business model emerging. The digital disruption by meal kits and delivery start ups and the transformation they bring is still poorly understood.

But there are also a number of threats on the horizon:

The trend to unintentionally cloned-yet-unique hipster enclaves that have their own name and menu but are basically interchangeable with a hundred other brick oven pizza, high end coffee roasters etc is fizzling out – because it becomes too mainstream.

The cost structures are changing, especially with rising minimum wages and other regulatory burdens threatening restaurants.

RETAIL

KEY QUESTIONS

- Does the boom in fresh and fresh prepared require new stand-alone outlets?
- How will Whole Foods new 365 format set new standards in foodservice?
- Will grocery stores all look like Eataly in future? How has it blended foodservice and grocery so well? Why is Kochhaus such a great innovation?
- How can foodservice support a click & collect offer?
- How much longer will the sushi trend in retail continue? Where will the sushi trend go, who are some of the leaders?
- What is Dutch hypermarket Jumbo's Foodmarkt concept about? What lessons can it teach fellow hypermarket retailers about how to modernise the format?
- How has Kroger ramped up its foodservice offering both through offline and online channels? What role will its concept Main & Vine banner play?
- How has IKEA become the leading non-food retailer in foodservice sales? How successful has its inner city centre store concept been? How has IKEA used foodservices to design new stores in the US?
- When did restaurant/bar sales overtake grocery store sales for the first time in the US?

FOODSERVICE

KEY QUESTIONS

- Why has breakfast become a key battleground for foodservice players?
- Is fast casual already dead? Or has the fast casual trend just lost steam? Are fast food chains really doomed?
- Who is the outstanding foodservice player on a sales per store basis?
- Why has Starbucks beaten Apple and Google in how to make mobile payments work? How has Starbucks's Mobile Order & Pay app help rethink its store design and location strategy?
- What does the future hold for McDonald's? Will breakfast be the answer? Can it win back customers from the more premium artisanal burger restaurants? In what ways have McDonald's become more convenient for customers on both sides of the Atlantic? How relevant is the company in today's health and wellness and fresh-conscious society?
- What have been the success factors for fast casual burger chain Hans im Gluek?
- What is clever about Akindo Sushiro's use of customer data?
- What strategies are in place at Itsu to compete for the busy lunch-time trade and develop the brand among grocery shoppers?
- How have bakery-café chains Le Pain Quotidien and Panera Bread consistently remained leaders in the fast casual space? What resonates so well with customers?
- Which well known UK pizza chain is focusing on its retail range to build brand awareness?

ONLINE - MEAL KITS

KEY QUESTIONS

- What are the major new online models disrupting the foodservice sector?
- How do meal kits help organic farmers sell new products and guarantee sales volumes? Is this the most efficient and least wasteful way of getting the right amount of food to the end customer?
- What are the advantages of meal kit provider Blue Apron's recipe led approach rather than being ingredients focused?
- Who are the major players and which grocery players are keen to get into the business?
- Will Amazon dominate meal kits in future? Why has Amazon decided to enter the meal kits space?
- What niche foodservice sector are players EatFirst, Bonapeti and Pure Package in?

ONLINE - DELIVERY

MARKETPLACES

KEY QUESTIONS

- Who are the leading online delivery platforms and how are they different from each other? What are the key battlegrounds in the sector?
- Why do online delivery companies hold the best insights on where to open offline restaurants and what cuisine to offer in which area?
- Who will come out on top between UberEats and deliveroo?
- What are decentral kitchens such as roo boxes?
- Will foodservice all be about last mile logistics in future?
- What is Maple and what is unique about its business model? What are the advantages and disadvantages of the approach? Is Maple the model for all future restaurants?

STREET FOOD

KEY QUESTIONS

- What is London Union and how is it changing the food landscape in the UK's capital?
- Who are StreetDots and what service do they provide?
- What is the unique concept behind Denmark's Torvehallerne? Why has it been so successful to date?
- What innovations can we expect from the sector?

RECOMMENDATIONS

- How can foodservice players identify enduring trends and avoid short lived fads?
- Will vertical integration become much more important for wholesalers supplying independents?
- What are the hottest digital innovations in foodservice right now? Who is innovating at the back end?
- Will the future all be about healthy customisation such as offered by the NY or UK salad bar players (Tossed, Vital ingredient)?
- Is cash desk automation just a stepping stone for the cashless society and mobile payment?

FEATURES

FOODSERVICE REPORT

- Stand out innovations profiled from foodservice, retail, online (meal kits, delivery marketplaces) and street food
 - Outlines the threat and opportunities from online transforming both retail and foodservice
 - Recommendations for retailers, foodservice operators, wholesalers, online players and street food operators
 - US data on foodservice and retail spend, fresh prepared data
 - Close look at how hypermarket and supermarket retailers are innovating in fresh food, foodservice and blurring the lines
 - In-depth analysis of how foodservice players are using online and technology (in fast food, quick service and fast casual)
 - The most important points to know about online foodservice models: meal kits/recipe bags and online delivery platforms
 - The reasons behind the growing popularity of street food
 - An assessment of the technologies that have provided breakthroughs for foodservice players
- 
- A large blue triangle is located in the bottom-left corner of the slide, pointing towards the bottom-right.

BENEFITS

FOODSERVICE REPORT

- Learn how to incorporate latest innovations and hot trends from around the globe into your business model and benefit from proven winning strategies
 - Understand what the millennial shopper wants, revive footfall, conversions and sales growth
 - Appreciate the benefits of joined up thinking and vertically integrating as well as the importance of quality and provenance for food service
 - Develop awareness of the latest innovative companies and business concepts disrupting foodservices and food retailing
 - Understand in detail how online has disrupted the two industries and what offline players can do about it
 - Gain insights into the nuances in the relationship between foodservices and food retailing and how they influence each other
 - Appreciate the specific trends and opportunities across different customer segments
- 
- A large blue triangle is located in the bottom-left corner of the slide, pointing towards the bottom-right.

IKEA: City Centre store Hamburg, food service a run away success, a store visit	p34	Sushi Daily: new dim sum concept trialed in France	p55
IKEA: among top 5 of most visited German stores, but basket sizes down	p35	Deli de Luca: Norway's convenience-deli hybrid	p56
IKEA: foodservice at the heart of US store strategy, seafood sustainability	p36		

TABLE OF CONTENTS 2/3

Foodservice players – How to use online and innovate in restaurants p57

Introduction: innovations in foodservice	p58
McDonald's: adding convenience, tablets, kiosks, table service, customization	p59
McDonald's: all day breakfast in the USA and Australia	p60
McDonald's: McCafé self-service coffee machines	p61
McDonald's: the bull versus the bear case, the positive case	p62
McDonald's: the bull versus the bear case, another Kodak?	p63
Burger King: delivery in house and partnering with deliveroo, Hungryhouse	p64
Hans im Glueck: premiumising burgers in Germany	p65
Hans im Glueck: premiumising burgers in Germany, stats & data	p66
Quick serves: Akindo Sushiro sushi chain's innovative data use part I	p67
Quick serves: Akindo Sushiro sushi chain's innovative data use II, IPO?	p68
Quick serves: Itsu delivery app and grocery range	p69
Quick serves: Itsu delivery app and grocery range, latest trading data	p70
Quick serves: Veggie Pret pop-up shop	p71
Le Pain Quotidien: leading fast casual player, app innovation	p72
Panera Bread: Panera 2.0, digitizing the restaurant experience	p73
Panera Bread: Panera 2.0, delivery service roll out sped up	p74
Panera Bread: removing artificial flavours, incredible US\$ sales per outlet	p75
Pizza Express: updated retail range	p76
Pizza Express: signs up with Deliveroo	p77
Starbucks: the best mobile payments operator in the world	p78
Starbucks: the stats behind the app, driving ATV higher, data insights	p79
Starbucks: reshaping the stores, digital spending, licencing the success?	p80
Starbucks: opens first express store in the UK	p81
Starbucks: Tie-up with Italian boutique bakery, premiumisation	p82

Meal Kits and Delivery – How online is disrupting foodservice p83

Introduction: online disruption in foodservice	p84
Introduction: demand for higher quality food	p85
Linus Matkasse and the copycats – recipe bag providers tackling delivery costs differently – the subscription solution and unique product	p86
Linus Matkasse: Swedish innovation, the recipe bag provider	p87
Linus Matkasse: curated shopping in online grocery, skills enhancer	p88
Linus Matkasse: innovative loyalty generation, the data	p89
Linus Matkasse: foreign expansion, cooperation with an omnichannel grocer?	p90
Linus Matkasse: latest developments, stretching the offer	p91
Linus Matkasse: selling out? Hercules invests, breaking the SEK1.0 billion barrier	p92
Meal Kits: some background data USA, main points of player differentiation	p93
Blue Apron: 8m meals per month, rethinking the supply chain, eliminating waste	p94
Blue Apron: "selling recipes not ingredients", pushing unconventional produce	p95
Blue Apron: the big data approach to customisation, adding more choice	p96
Blue Apron: planning meals a year out	p97
Blue Apron: Preparing for the IPO, or to be bought out?	p98
Plated: venture funding, positioning itself as more premium than the competition	p99
Plated: investing in choice mechanics	p100
HelloFresh: explosive revenue growth and widening losses, the data	p101
HelloFresh: Active subscribers and servings delivered, the data	p102
HelloFresh: Rocket's Global takeaway group, the strategy	p103
HelloFresh: expanding the FC footprint in the US and pulling the IPO	p104
HelloFresh: Strategic Partnership with Jamie Oliver, DC in Germany	p105
Amazon: Meal kits to be launched in autumn in partnership with Tyson Foods	p106
Kochzauber: Lidl buys recipe bag provider Kochzauber	p107
Chilled delivered meals: heat up at home, EatFirst, Bonapeti, Pure Package et al	p108

TABLE OF CONTENTS 3/3

Online delivery platforms

Just Eat: GMV of £1.7bn, highly profitable, Europe's largest player
 Just Eat: pureplay marketplace operator without a logistics set up
 Just Eat: consolidating different orders into a single delivery, big data consulting
 Just Eat: online data for offline restaurants, trialing delivery robots
 Just Eat: divesting out of Benelux, Takeaway.com takes over
 Deliveroo: partnering with premium restaurants, providing the delivery capabilities
 Deliveroo: fund raising, the Pizza Express partnership, alcohol deliveries
 Deliveroo: investing in its own decentral kitchen spaces – "RooBox"
 Deliveroo: the challenge from Uber and Amazon
 UberEATS: launches in London, signs up 150 restaurants, undercuts deliveroo
 UberEATS: will Uber cab customers migrate to UberEATS?
 Amazon: Amazon Restaurants to come to the UK
 Amazon: Amazon daily dish
 Amazon: taking on and copying Peach
 Maple: a fully integrated operation, the online only restaurant
 Maple: 30 de-central kitchens across NY, delivery within 15m, 1,100 meals per hour
 Postmates: Starbucks and Pop express delivery service

Foodstalls – The street food revolution

Introduction: renewed vibrancy, DIY spirit and social media

London Union: Changing London's food landscape, looking for shed space
 London Union: London Union, the boom in street food
 London Union: street food vendors in Trinity Leeds
 StreetDots: Street food vendor platform
 Enterprise Street Food app: innovative technology

SAMPLE PAGES

Just Eat: consolidating different orders into

- Looking ahead, there are plans to add payment solutions, offer greater insights to restaurants, and other experiments such as consolidating orders from different restaurants into a single delivery journey – but this will be extremely difficult to scale, if the logistics isn't owned in house. But there is certainly **work to be done on bundling trips and taking couriers off the road – again this is hard to do as food deliveries are highly time sensitive, hard to scale as there is a rush in orders at peak times and then times when nothing happens at all even in London.**
- Just Eat has found that it generates higher average transaction volumes for its partners, so that some restaurants have gotten rid of telephone ordering, as online ordering pushes the basket sizes up.

Just Eat also knows due to its historic and real time data what restaurants will work well in a given location. Just Eat knows what people in the addressable catchment are going online for, which offers exist at what price point, where are there white spaces. With the data one can easily see whether there is space for a sushi restaurant in a certain neighborhood, because currently there isn't one, but the purchasing power levels are high enough and crucially customers are looking for such a restaurant and deliveries from it online.

Such data can also help to fine-tune the menu by giving hard data on what products convert best at what price points and whether compared to the wider competition the right options are being in effect offered. An operator might have for example missed the gluten free trend etc.

- Vertical integration. The big corporate foodservice chains are also interesting because they have often vertically integrated their supply chains to guarantee quality standards at certain price points and also supply levels. Just as in retail, vertical integration and owning your own production sites is a core asset to manage the business, input costs, logistics etc. This also enables them to react quickly to emerging trends and launch NPDs, as they own the production sites. Vertical integration should also be good for story telling and marketing.
- Especially in food service the price quality ratio is of utmost importance for the consumer. So getting to grips with quality is a necessary prerequisite for a successful business.
- It should also be noted that in the food service industry it is pretty much all about private label

as the product gets transformed by the chefs - so getting the right private label offer in place is crucial for any cash & carry suppliers and wholesalers to the industry. For wholesalers and cash & carry retailers private label development takes quite a long lag time. Even if they started to vertically integrate the cycle from inception to product actually being on shelf would probably take about 9 months. **But vertical integration would certainly help with the process.** So perhaps wholesalers should look at acquiring farmland and production sites for agricultural products.

Private label development raises a further important point: these wholesalers and cash & carry retailers need to be sure they are dealing with a long term sustainable trend. They all want to avoid following a short term fad that has burned out by the time the new product development actually hits the market place.
